EDUCATION

Elizade University — **Ilara-mokin, Ondo**
Bachelor of Science in Computer Science — October 2022 – Sept. 2026
- Current CCGPA: 4.72/5.00

Royal College — **Masaka, Nasarawa**
West African Senior School Certificate Examination — Sept. 2014 - July 2020

TECHNICAL SKILLS

Language: Python, Java, SQL, R, Git, HTML/CSS.
Frameworks: FastAPI, Uvicorn, LangChain, LlamaIndex, Streamlit, PyTorch, TensorFlow, MySQL, .
Libraries: Numpy, Pandas, Scikit-Learn, PyOpenGL, PyMongo, Neogj, Certifi, SQLAlchemy, psycopg2, Pydantic.
Tools & Platforms: Git, GitHub, VS Code, Jupyter Notebook, Figma, Google Colab, MongoDB Atlas, Neo4j AuraDB, PyCharm, Azure.

EXPERIENCE

Data Science Intern — April 2025 - October 2025
National Center of Artificial Intelligence and Robotics (NCAIR)
- Engineered and trained a Facial Recognition system and a brain tumor detection model, leveraging VGG16 and Xception transfer learning pipelines to improve image classification accuracy by 98%
- Conducted comprehensive statistical research analyzing the impacts of domestic violence on women's mental health, performing data cleaning, feature engineering, and regression modeling across 161155 dataset records.
- Spearheaded the end-to-end user-centered design of "Mellow," a guided journaling mental wellness app, utilizing Figma to map user personas and develop over 30 high-fidelity interactive screens.
- Contributed to the conceptualization and development of a location-based business finder, transforming product requirements into functional user flows and prototypes within a 5 week agile sprint.
- Successfully executed and delivered 7 major functional projects across intensive training cohorts, demonstrating cross-functional proficiency in Python, applied Data Science and full-lifecycle product development.

Network Engineer Intern May 2024 - October 2024

Verse Consulting & IT Services Limited – Abuja, Nigeria

- Collaborated on enterprise network architecture and redesigns, assisting in the implementation of VLAN segmentation across 6 departments to improve traffic flow and internal security.
- Configured and optimized routing protocols (such as OSPF and EIGRP) on enterprise routers, successfully decreasing network latency by 25% for critical business applications.
- Participated in the site surveys and wireless heat mapping, deploying optimal access point placements that improved Wi-Fi signal coverage by 35% in high-density office environment

Network Technician Intern May 2023 - October 2023

Qisis Integration Solution Limited – Abuja, Nigeria

- Assisted in the physical deployment and cabling of local area networks (LANs), successfully terminating and routing over 1000 meters of CAT6 cable to establish reliable connectivity for 85 workstations.
- Configured and provisioned network hardware, including switches, routers, and access points, reducing average device deployment time by 28% across client sites.
- Provided Tier-1 network support and troubleshooting, diagnosing and resolving 25+ connectivity issues per week to minimize user downtime.
- Monitored network infrastructure health utilizing network management tools, ensuring 99.5% uptime across 120 active network nodes.

PROJECTS

Adaptive Intelligent Tutoring System | Python, RAG, Reinforcement learning (Jan.2026 - Present)

- Engineered a personalized learning platform utilizing Retrieval-Augmented Generation (RAG) to dynamically generate tailored educational content based on real-time user proficiency
- Integrated Reinforcement Learning algorithms to continuously optimize adaptive learning pathways, designed to improve student engagement and knowledge retention by 45%
- Designed the system architecture and implemented the backend logic to ensure seamless content delivery and dynamic user capability assessment

Mellow Mental Wellness App | Figma, UI/UX Design, Prototyping (Sep. 2025 - Nov 2025)

- Spearheaded the end-to-end user-centered design of a guided journaling and habit-building application using Figma, effectively mapping complex user personas and journeys.

- Developed 30 high-fidelity, interactive prototype screens featuring intuitive user flows optimized for mental wellness and user retention.

Brain Tumor Classification Models | Python, VGG16, Computer Vision (Sep. 2025 -Mar 2026)

- Engineered a medical classification model leveraging VGG16 transfer learning pipelines to accurately detect and categorize brain tumors
- Optimized the neural network architecture to extract complex spatial features, successfully achieving a 98% image classification accuracy for diagnostic applications.
- Deployed the trained inference model into a functional, interactive web application using Streamlit, enabling seamless user uploads and real-time visual analysis.
